Mechanicsburg and the stations that contribute to our estimates in its history of temperature and climate. Please note that the contribution of each source is regulated for the elevation and the relative modification present in the Merra-2 data. Other data all data relating to the position of the sun (for example, dawn and sunset) are calculated using astronomical formulas from the book, 2nd edition astronomical algorithms, by Jean Meeus. All other meteorological data, including cloud coverage, rainfall, velocity of the wind and direction, and solar flow, come from the NASA Merra-2 Modern-era Retrospective Analysis. This residence combines a variety of measurements in an avant-garde global meteorological model to reconstruct the hourly history of time all over the world on a grid of 50 kilometers. Land The use data come from the Global Land Cover Share database, published by the Organization for Food and Agriculture of the United Nations.
